Everything you love...

The LIFESTYLE is a complete hi-tech Premium Performer Cruiser design with the emphasis on top level performance to capture the spirit of the competitive sailor and at the same time offering all the comfort and style for the enjoyment of the cruising family or single handed sailing. Created from a vision and developed throughout hard science knowledge with an extensive degree of innovation for comfort, style and performance her design combines form and function with strict consideration for the overall aesthetic and functionality.

Premium Interior Design

The LIFESTYLE boasts an inimitable Italian interior style created by WAHINE YACHTS combined with a modern hull design that features long waterlines to lift her performance to a new level in its class. The optimized lead keel, tall rig and clear deck featuring high quality deck equipment delivers the most rewarding time on the water.

The Below deck of the LIFESTYLE immediately feels much bigger, enjoying a modern U-shaped saloon with an optimized design with an L-shaped full size galley on starboard featuring ample storage space a propane built-in oven, 2 hubs range, 65Lt drawer fridge & freezer and an oversized stainless double sink enhanced by a private hideaway wine-cava for 7 exclusive bottles all surrounded by an ample seating area with a 2 leaf oval table that can be re-arranged in different and innovative configurations on the go to allow up to 6 adults to comfortable sleep on board.

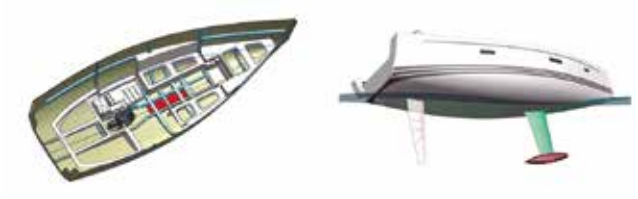

The raised deck cabin has an integral full wrap-around windshield added to a large cabin skylight and 4 portholes ensuring a natural bright living space with plenty of ventilation and an unmatched 6’1” of headroom, AC and heating. On port-side the LIFESTYLE delivers a full enclosed head compartment with an ultra-silent electric head, plenty of storage room, independent wet-locker and a large luggage compartment, stylish glass sink and a multifunction shower partition with hot water.

What a LIFESTYLE is made off?
Full Carbon Grid Structure
The hull structural strength is a key factor in overall boat safety, and in its resistance to ever-demanding ocean conditions. Maintaining the highest design of structural frames among boat builders, the full carbon grid system of the LIFESTYLE is one of the most comprehensive reinforced structures on the market today. Adding a unique combination of gluing and laminating techniques to the hull joint is the final proof that the LIFESTYLE is build to last.

"T" shaped Keel
The cast iron fin and lead ballast keel pre-sealed for protection and smooth finish is attached to the hull by premium grade stainless bolts that are highly resistant to corrosion. The internal grid structure ensures the best possible strength and flexibility in beating to windward, or in severe groundings.

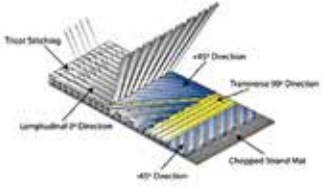

Chainplates
Chainplate loads are spread via custom made High Quality marine stainless plates incorporated into the hull and deck structure adding extra strength and resistance.

Hull – Deck joint
To preserve the design shape of the hull prior to the joint, custom metal jigs are used.

Thanks to the in-turning wide flange of the hull a strong support for the deck and a large surface for bonding material is created. Hull and deck are joined together by a 3-way technique: Gluing of the hull and deck together, use of stainless steel bolts for mechanical shear, fastening and laminating of the bow and transom infusion sandwich bulkheads to achieve an even greater stiffness and sturdiness.

High Quality materials
Carefully selected suppliers and materials are subject to a strict quality control. The use of state of the art composite materials enables us to optimize the laminate schedule of each LIFESTYLE. Unidirectional, Biaxial, Triaxial and Quadriaxial glass fiber and carbon cloths combined with hi-tech core composite materials are the reason to the superior strength and light weight. The use of Vinylester resin at the external layers and Isophtalic Polyester within the inner layers ensure a perfect anti-osmosis protection system and superb mechanical properties.

Gelcoat

Apart from the finish aesthetic function, the gelcoat is used to prevent water penetration into the fiberglass laminate to preserve its stiffness over long periods of time. In order to achieve the highest level of consistency in quality and thickness high quality gelcoats are hand sprayed using computer-controlled mixing nozzles in a carefully monitored spraying process.

Vacuum Infusion

A modern deck full of edges like the one that gives the unique personality to the LIFESTYLTE represents a big challenge for conventional hand laid techniques. The ultimate goal in deck construction of any shipyard is to be able to achieve the required strength and stiffness with the least weight possible. Unnecessary weight makes a yacht more difficult to manage and less enjoyable to sail. Thanks to the Vacuum Infusion Lamination technique applied to manufacture the LIFESTYLE the results are more than promising.

Safety

As sailing has become more and more competitive and demanding, high emphasis has been placed on the use of the available space, maneuverability, overall performance, comfort and equipment. However, beside the expectation of a good return on investment the unique owners of a LIFESTYLE are also concerned about safety. This is where WAHINE YACHTS comes in and set an owner's mind at rest. The production facility chosen by WAHINE YACHTS in Bristol, Rhode Island, "C&C Fiberglass" fulfils the highest standards for the manufacturing of the LIFESTYLE following ABYC standards working under rigorously compliance of the National Marine Manufacturers Association (NMMA).

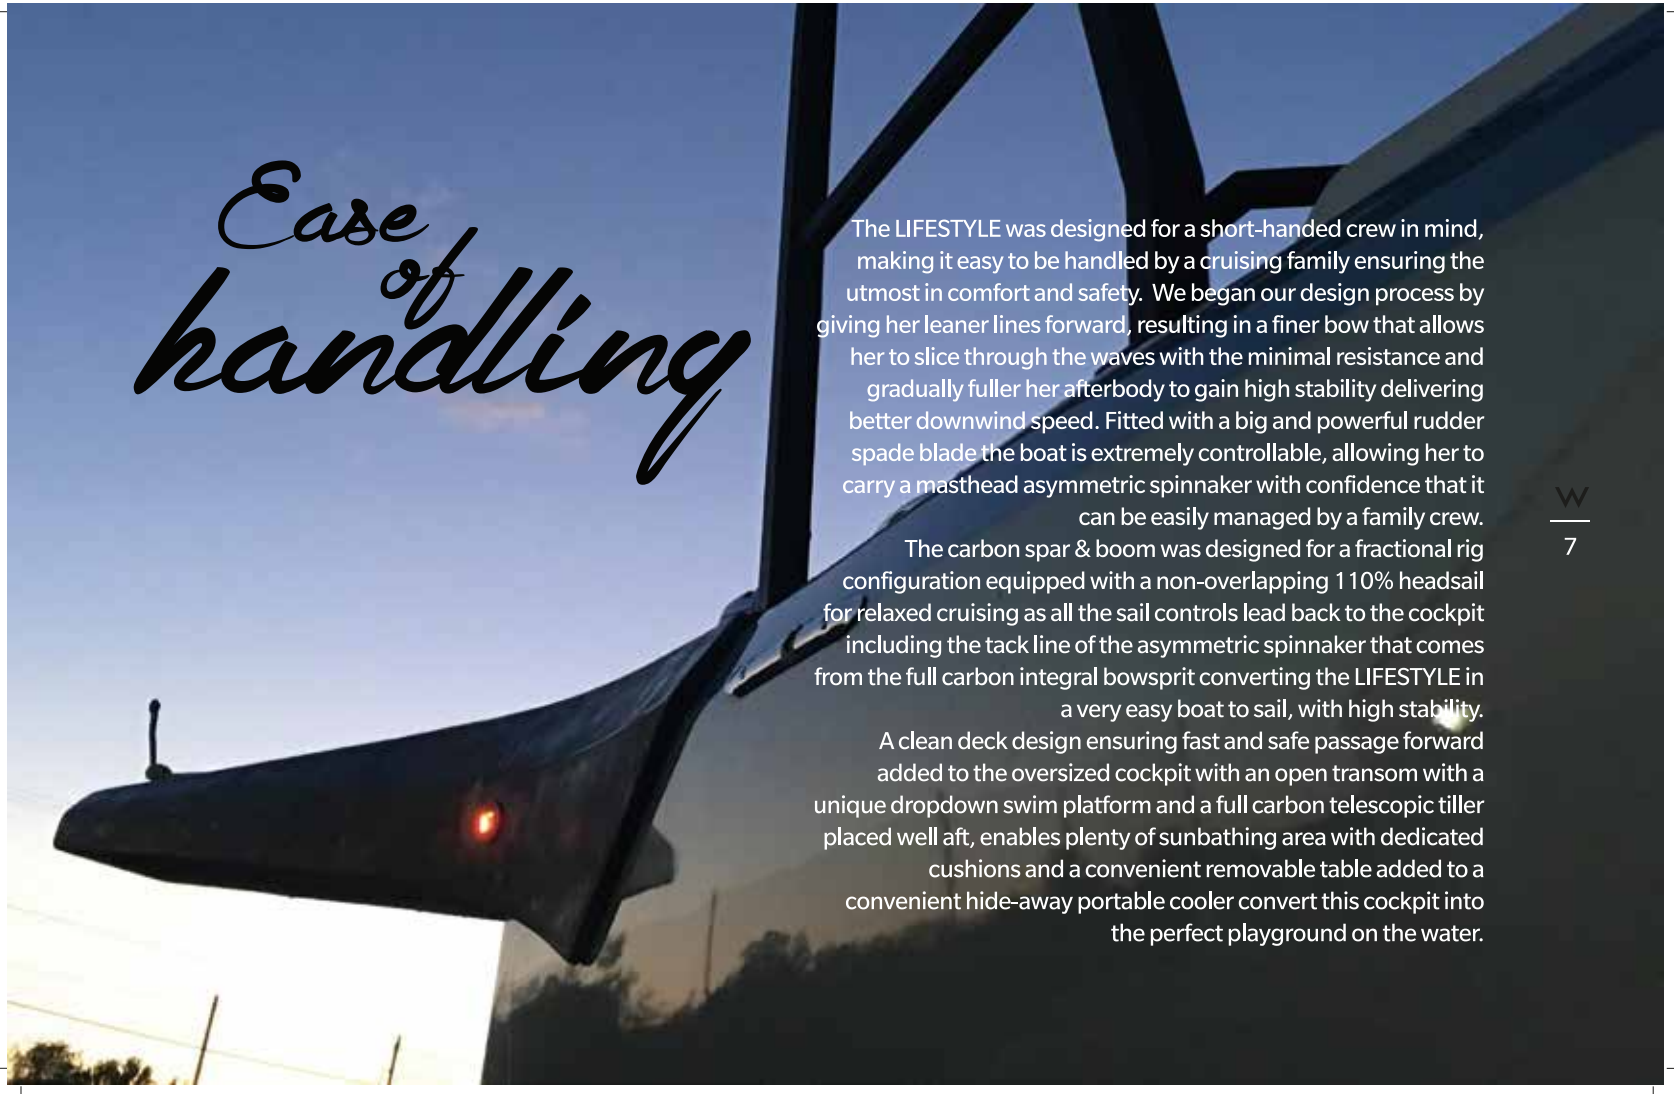

"There are three classes of people:
Those who see, those who see when they are shown,
those who do not see."
Leonardo da Vinci

Premium Performance Design

The dream of a premium performer cruiser like the LIFESTYLE can only be told through the words of FARKAS & PIZL, the men who more than anyone else have imagined, desired and shaped it, like the great sculptors of the past who had to struggle with shapeless but full of soul marble blocks. From the beginning we set ourselves an ambitious target extremely difficult to overcome from a technical point of view as it was to create a premium performer cruiser that would look, feel and perform like the big sailing yachts but sculpted in a small and unique marble block. Engaging in such a challenge to create only 150 unique art pieces while under production in the years to come meant an impressive effort for our company not only from the technical aspect but also from the human and financial.

Ease of handling

The LIFESTYLE was designed for a short-handed crew in mind, making it easy to be handled by a cruising family ensuring the utmost in comfort and safety. We began our design process by giving her leaner lines forward, resulting in a finer bow that allows her to slice through the waves with the minimal resistance and gradually fuller her afterbody to gain high stability delivering better downwind speed. Fitted with a big and powerful rudder spade blade the boat is extremely controllable, allowing her to carry a masthead asymmetric spinnaker with confidence that it can be easily managed by a family crew.

The carbon spar & boom was designed for a fractional rig configuration equipped with a non-overlapping 110% headsail for relaxed cruising as all the sail controls lead back to the cockpit including the tack line of the asymmetric spinnaker that comes from the full carbon integral bowsprit converting the LIFESTYLE in a very easy boat to sail, with high stability.

A clean deck design ensuring fast and safe passage forward added to the oversized cockpit with an open transom with a unique dropdown swim platform and a full carbon telescopic tiller placed well aft, enables plenty of sunbathing area with dedicated cushions and a convenient removable table added to a convenient hide-away portable cooler convert this cockpit into the perfect playground on the water.

We are confident that the LIFESTYLE will quickly become the benchmark by which other boats of this class will be judged. We feel confident that the LIFESTYLE will definitely raise the bar significantly and believe that she will become an iconic craft in the years to come.
We look forward to her becoming a familiar silhouette along all the US marinas and beyond.

L.O.A.:	26’ / 7,92mts
Beam:	9’7” / 2,92mts
Headroom:	6’1” / 1,85mts
Draft:	5’ / 1.50mts
Displacement:	5,071Lb / 2,300 Kg
Ballast:	Bulb keel 1,430Lb / 650Kg
Sail area:	Main+Jib 473SqFt / 44SqMts
Engine:	Yanmar 2YMD15/Saildrive
Configuration:	2 double berths, sleeps 6 people
